

The True Notions Of Physics

# Anshum's Notionality Principle

S.Anshuman

---

*“It is all about the Notionality of quantities “*

According to Anshuman's Notionality Principle, for every physical quantity there exists a non- physical quantity the same in units but different in magnitude. This non-physical quantity is called Notional quantity and is usually defined by the perception of the observer, listener or receiver. This is created by the surrounding media and sometime other factors like time and direction' also influences Notionality. There are infinite notional quantities in the physics that are defined by the different equations derived.
